

X National Conference on Planetary Science

Bormio, January 17-21, 2011

Scientific Organizing Committee

Armando Blanco (University of Lecce, Italy),
Fabrizio Capaccioni (INAF, IASF, Roma, Italy),
Alberto Cellino (INAF, Observatory of Torino, Italy),
Angioletta Coradini (INAF, IASF, Roma, Italy),
Mario Di Martino (INAF, Observatory of Torino, Italy),
Elisabetta Dotto (INAF, Observatory of Roma, Italy),
Luigi Folco (University of Siena, Italy),
Monica Lazzarin (University of Padova, Italy),
Andrea Milani (University of Pisa, Italy),
Alessandra Rotundi (University of Napoli, Italy),
Giovanni Stazzulla (INAF, Observatory of Catania, Italy),
Gian Paolo Tozzi (INAF, Observatory of Arcetri, Italy)

Local Organizing Committee

Mario Di Martino (INAF, Observatory of Torino, Italy; Chair),
Alessandro Manara (INAF, Observatory of Brera, Italy),
Giovanni De Sanctis (INAF, Observatory of Torino, Italy),
Stefania Rasetti (INAF, Observatory of Torino, Italy),
Claudio Casacci (ADA)

Sponsorship

INAF, Osservatorio Astronomico di Torino, Banca Popolare di Sondrio, SELEX Galileo,
Telespazio, Micos Italia, Thales Alenia Space, Carlo Gavazzi Space, ASI

FOREWORD

The 10th edition of the Italian National Conference on Planetary Science was held in Bormio (SO) from January 17 to 21, 2011. These meetings represent the main occasions to gather the Italian scientists involved, or simply interested, in research projects about all topics of the Planetology. Past and current editions saw the participation of specialists of all fields of the planetological research about, for instance, Solar System Planets and their Satellites, Asteroids, Comets, Meteors and Meteorites, Extra Solar Planet, etc... . Planetology is a multidisciplinary science going beyond the boundaries of the Astronomy and the Astrophysics and involving the fields of Geology and Solid-State Physics. For this reason Planetology makes use of various methods of investigation, from the classical ground and space observations to the theoretical modeling, from the laboratory analysis to the space exploration. Space exploration creates a close link between the community of the scientists and Aerospace Industry, whose participation in these meetings is more and more assiduous. New points of contact are being developed for the problem of space debris surveillance around the Earth. During the last meeting a snapshot of the current status of a large part of all these activities in Italy has been provided, and this book collects the proceedings prepared by the community.

Aldo Dell'Oro
