

**Workshop on Adaptive Techniques in Computational
Astrophysics and Biology**

Catania, November 12-14, 2004

editors: V. Antonuccio and U. Becciani

TABLE OF CONTENTS

<i>Foreword</i>	5
<i>List of participants</i>	7
G. Bodo, C. Zanni, S. Massaglia and A. Ferrari and P. Rossi <i>Adaptive Mesh Refinement simulations of jet formation</i>	10
A. Bonanno <i>An accurate numerical approach for the kinematic dynamo problem</i>	18
G. Colombo <i>Folding and mis-folding of peptides and proteins: insights from molecular simulations</i>	25
L. Del Zanna <i>Relativistic MHD with central-type schemes</i>	37
G. Gerardi, D. Molteni <i>Parallelization of a Smoothed Particle Hydrodynamic Code for Simulation of Shocks in Accretion Disks</i>	47
C. Gheller, F. Sartoretto, M. Guidolin <i>GAMMS: an AMR multigrid gravity solver code</i>	56
R. Keppens, J. Bergmans and H. Baty <i>Grid-adaptive computations for magnetized astrophysical plasmas</i>	62
P. Londrillo <i>Adaptive grid-based gas-dynamics and Poisson solvers for gravitating systems</i>	70
S. Melchionna <i>Molecular Dynamics simulation of biosystems: Perspectives and open problems</i>	76

- S. Orlando, G. Peres, F. Reale, T. Plewa, R. Rosner and A. Siegel
Using AMR to Simulate the 3-D Hydrodynamic Interaction of Supernova Shocks with Interstellar Gas Clouds 83
- F. Pasian
Virtual Observatory and Grid-related projects: national and international status 87
- D.J. Price, J.J. Monaghan
Smoothed Particle Magnetohydrodynamics 94
