

Astrophysical impact of abundances in Globular Cluster stars

Proceedings of Joint Discussion 04 at the XXIII IAU General Assembly

Sydney, 16-17 July 2003

editors: Francesca D'Antona and Gary Da Costa

TABLE OF CONTENTS

<i>Foreword</i>	264
Observed Abundances	
C. Sneden <i>Abundances in Globular Clusters: successes and questions</i>	267
R. Gratton <i>Abundances in scarcely evolved stars in Globular Clusters</i>	274
P. Bonifacio <i>Lithium abundances in Globular Clusters</i>	282
I.I. Ivans, C. Sneden, G. Wallerstein, R. P. Kraft, J. E. Norris, J. P. Fulbright, G. Gonzalez <i>On the question of a Metallicity Spread in Globular Cluster M22</i>	286
L. Stanford, G.S. Da Costa, J. E. Norris, R. D. Cannon <i>The metallicity and Age Ranges in Omega Centauri</i>	290
R. Kraft <i>A comparison of Globular Cluster and halo field stars</i>	295
General Discussion I	
B. Barbuy <i>Open session: at what stage is the abundance determination problem?</i>	298
M. Asplund <i>Globular Cluster abundances in the light of 3D hydrodynamical model atmospheres</i>	300
M. S. Bessell <i>The Temperature Scale of Globular Cluster Stars</i>	306

- C. Van't Veer, R. Cayrel
Oxygen abundance and convection 310

Sites for Production

- K. Nomoto, K. Maeda, H. Umeda, N. Tominaga, T. Ohkubo, J. Deng,
P.A. Mazzali
Population III Supernovae and their Nucleosynthesis 312
- J. Lattanzio, A. Karakas, S. Campbell, L. Elliott, A. Chieffi
The role of AGB stars 322
- P. Denissenkov
Today's AGB stars and the role of binaries 328
- P. Ventura F. D'Antona, I. Mazzitelli
New AGB models to explore the spread of abundances in Globular Clusters 335

Today's stellar evolution

- G. Michaud, O. Richard, J. Richer
Processes at the turnoff 339
- A. Weiss, C. Charbonnel
Mixing along the Red Giant Branch 347

General Discussion II

- D.A. Vandenberg F. D'Antona, P. Denissenkov, J. Lattanzio, G. Michaud,
S. Vauclair, A. Weiss
General Discussion II: On current stellar models 356

Formation and early evolution of Globular Clusters

- B. Elmegreen
Formation of stars in clusters 362
- T. Shigeyama, T. Tsujimoto
Globular Cluster formation from cloud–cloud collisions 366
- G. Da Costa, R. Cannon, B. Croke, J.E. Norris
Globular Cluster Abundance Anomalies: clues from the Main Sequence 370
- F. D'Antona
The Horizontal Branch Morphology in Globular Clusters: consequences for the selfpollution model 377

General Discussion III

- R. Cayrel
General Discussion III: Chemistry and Self-pollution mechanisms 385

P. Bonifacio	
<i>Abundance anomalies and lithium in Globular Clusters</i>	386
F. D'Antona	
<i>Can we build up second generation stars in GCs directly from the ejecta of AGBs?</i>	388
P.A. Denissenkov	
<i>A discussion of self-pollution mechanisms</i>	390
A. Weiss	
<i>The AGB contamination scenario</i>	391
G.S. Da Costa	
<i>Contribution to JD4 General Discussion III</i>	392
Posters	
U. Fritze – v. Alvensleben	
<i>Stellar Abundances in Young and Intermediate Age GCs</i>	394
L. Sbordone, P. Bonifacio, G. Marconi, R. Buonanno	
<i>Chemical Abundances in Terzan 7</i>	396
B. Barbuy, J. Meléndez, S. Ortolani, M. Zoccali, E. Bica, A. Renzini, V. Hill, Y. Momany, D. Minniti, M. Rich	
<i>Abundance analysis of the bulge globular clusters NGC 6553 and NGC 6528</i>	398
J. A. Johnson	
<i>A survey for CH stars in Globular Clusters</i>	400
T. Tusujimoto, T. Shigeyama	
<i>Star Formation History in Omega Centauri</i>	402
